Dom Scripting: Web Design with JavaScript and the Document ...

The "object" part of Document Object Model should make a lot more sense now than it did the first time the DOM came up, though: the DOM is a representation of a web page in the form of an object, made up of properties that represent each of the document's child elements and subproperties representing each of those elements' child elements, and so on.

JavaScript for Web Designers: DOM Scripting - A List Apart

The Document Object Model is a cross-platform and language-independent interface that treats an XML or HTML document as a tree structure wherein each node is an object representing a part of the document. The DOM represents a document with a logical tree. Each branch of the tree ends in a node, and each node contains objects. DOM methods allow programmatic access to the tree; with them one can change the structure, style or content of a document. Nodes can have event handlers attached to them. O

Document Object Model - Wikipedia

The Document Object Model (DOM) is a standard for conceptualizing and representing the contents of an HTML or XML type document. Mr. Keith's book teaches how to use JavaScript to manipulate the DOM so that you can dynamically add or remove content from a page, change the way things look, or move things around.
