Emergent Nested Systems A Theory

It suggests a theory of complex systems as nested systems, i. e. systems that enclose other systems and that are simultaneously enclosed by even other systems. According to the theory presented, each enclosing system emerges through time from the generative activities of the systems they enclose. Systems are nested and often emerge unplanned, and every system of high dynamics is enclosed by a system of slower dynamics.

Emergent Nested Systems - NASA/ADS

In covering systems theory, Macy relies on the work of von Bertalanffy and Laszlo and their concept of “cybernetics II” in developing her analysis of systems theory. “Cybernetics II” allows for internal change within the system via its reaction to feedback, and so is self-organizing and emergent, whereas the original concept of ...

Emergent systems aren't new, of course, and their study goes back to the ancient Greeks. And emergence isn't just a natural phenomenon. From the scale of an entire city, humans are just like ants,

In philosophy, systems theory, science, and art, emergence occurs when an entity is observed to have properties its parts do not have on their own. These properties or behaviors emerge only when the parts interact in a wider whole. For example, smooth forward motion emerges when a bicycle and its rider interoperate, but neither part can produce the behavior on their own.

A Second Look at ENS Theory | SpringerLink

Systems theory is the interdisciplinary study of systems. A system is a cohesive conglomeration of interrelated and interdependent parts which can be natural or human-made. Every system is bounded by space and time, influenced by its environment, defined by its structure and purpose, and expressed through its functioning.

Introduction. In the first part of the series (Richardson, 2004) I discussed four general systems laws / principles -namely, the 2 nd law of thermodynamics, the complementary law, the system holism principle, and the eighty-twenty principle - in terms of complex-ity thinking. In this part I continue my analysis of systems theory,
