you that this idea of fractional exponents fits together nicely:
Things to try: Start with $m=1$ and $n=1$, then slowly increase n so that you can see $1/2$, $1/3$ and $1/4$; Then try $m=2$ and slide n up and down to see fractions like $2/3$ etc

OBJECTIVE: I can simplify and convert radical expressions and rational exponents. Sometimes fractional exponents are used to represent power of numbers or variables. The numerator of the fraction (m) represents the power, the denominator (n) represents the root. The exponent in the denominator must always be positive.
