Scroll down the page for more examples and solutions on how to use the Boyle's Law, Charles' Law, Gay-Lussac's Law,

# Read Book Gas Law Problems With Solutions

Combined Gas Law and Ideal Gas Law.  
Boyle's Law The relationship between  
pressure and volume of Boyle's Law is  
expressed in mathematical terms as  $P_1 V_1 = P_2 V_2$ .

**Gas Laws (solutions, examples,  
worksheets, videos, games ...**

Answer. As temperature of a gas

# Read Book Gas Law Problems With Solutions

increases, pressure will also increase based on the ideal gas law. The volume of the tire can only expand so much before the rubber gives and releases the build up of pressure.

## **7.2: The Gas Laws (Problems) - Chemistry LibreTexts**

Bonus Problem #1: 2.035 g H<sub>2</sub>

## Read Book Gas Law Problems With Solutions

produces a pressure of 1.015 atm in a 5.00 L container at  $-211.76\text{ }^{\circ}\text{C}$ . What will the temperature (in  $^{\circ}\text{C}$ ) have to be if an additional 2.099 g  $\text{H}_2$  are added to the container and the pressure increases to 3.015 atm. Solution: 1) What gas law should be used to solve this problem?

**ChemTeam: Ideal Gas Law:**

## **Problems #1 - 10**

Answer: To solve this problem we first place given values into our Boyle's law equation,  $P_1 V_1 = P_2 V_2$ . Multiply the left side and then divide by 760.0 mmHg to find x. The units of mmHg will cancel out.

Problem #10: When the volume of a gas is changed from \_\_\_ mL to 852 mL, the temperature will change from 315 °C to 452 °C. What is the starting volume?

Solution: Write Charles Law and substitute values in:  $V_1 / T_1 = V_2 / T_2$ .  
 $x / 588 \text{ K} = 852 \text{ mL} / 725 \text{ K}$   
 $(x) (725 \text{ K}) = (852 \text{ mL}) (588 \text{ K})$
