## **Immune System? | Yahoo Answers**

An immune system is a collection of biological processes within an organism that protects against disease by identifying and killing pathogens and tumor cells. It detects a wide variety of

## Online Library Immune System Yahoo Answers

agents, from viruses to parasitic worms, and needs to distinguish them from the organism's own healthy cells and tissues in order to function properly.

### **Importance of Immune System? | Yahoo Answers**

The immune system is made up of a network of cells, tissues, and organs that

## Online Library Immune System Yahoo Answers

work together to protect the body. The cells involved are white blood cells, or leukocytes, which come in two basic types that combine to seek out and destroy disease-causing organisms or substances.

### **What is the immune system? | Yahoo Answers**

## Online Library Immune System Yahoo Answers

The immune system has two main components: white blood cells and antibodies circulating in the blood. The antigen-antibody reaction forms the basis for this immunity. When an antigen (antibody generator)-such as a harmful bacterium, virus, fungus, parasite, or other foreign substance-invades the body, a specific antibody is generated to

# Online Library Immune System Yahoo Answers

attack the antigen.
