sectional dimension (N) much larger than the longitudinal dimension (T); when the opposite is true, we have a long panel. Normally, the same units are observed in all periods; when this is not the case and each period samples mostly other units, the result is not a proper panel data, but pooled cross-sections model.

Mathematical economics is the application of mathematical methods to represent theories and analyze problems in economics. By convention, these applied methods are beyond simple geometry, such as differential and integral calculus, difference and differential equations, matrix algebra, mathematical programming, and other computational methods. Proponents of this approach claim that it allows ...

Game theory is the study of mathematical models of strategic interaction among rational decision-makers. It has applications in all fields of social science, as well as in logic, systems science and computer science. Originally, it addressed zero-sum games, in which each participant's gains or losses are exactly balanced by those of the other participants.

Roger Bradshaw, in Sugar Trading Manual, 2004. Counter-trade. Counter-trade was a hot item in the 1970s and, in effect, was the basis by which the COMECON trading bloc was supposed to function. The late 1970s and early 1980s spawned a flurry of counter-trade activities. Possibly the best-known deal involving sugar was between Brazil and Iran ...

Regional Economic Integration - an overview ...

So there is a correlation between population level and food. However, the usual econometrics techniques are limited in their scope. For example, changes in the direction of the growth curve for a time population is hard for an econometrics model to capture. Further Readings: Delbecq, A., Group Techniques for Program Planning, Scott Foresman, 1975.

James Stewart - Textbook & Solutions Manual

Applied economics is the application of economic theory and econometrics in specific settings. As one of the two sets of fields of economics (the other set being the core), it is typically characterized by the application of the core, i.e. economic theory and econometrics to address practical issues in a range of fields including demographic economics, labour economics, business economics ...
