As the world progresses with an emphasis on efficiency and automation, mechatronic systems will evolve, and the subtle differences between robotics and mechatronics will become even less clear. Advanced communications, artificial intelligence, machine learning and augmented reality will be increasingly integrated with mechatronics.

Robotics vs. Mechatronics: Knowing the Difference ...

Robotics and artificial intelligence (AI) serve very different purposes. However, people often get them mixed up. A lot of people wonder if robotics is a subset of artificial intelligence. Others wonder if they are the same thing. Since the first version of this article, which we published back in 2017, the question has gotten even more confusing.

What's the Difference Between Robotics and Artificial ...

Robotics engineering is a subset of mechatronics. The difference between robotics and mechatronics requires a modulated examination. Robotics is taken into account a subset of mechatronics. Since the majority of robots are mechatronic but not all mechatronic systems are robots. Both were originally designed as mechanical systems.
